

Usability Test Feedback

Feedback:

1. The clients were impressed with the aesthetic of the prototype and approved of the colour choices and UI
2. Data viewing and editing were up to the client's standards and there were no complaints
3. The distinction between admin and non-admin users on the system was appreciated, as well as audit entry and approval functionality
4. The client expressed that due to recent news of a new reference data update being issued, the system could consider adding functionality to update hardcoded reference data.

Response:

Due to overwhelmingly positive feedback from the client, the project doesn't seem to require many changes from its current state. This has been the case since there had been consistent feedback and updates prior to the final client meeting itself. The matter of adding functionality for updating reference data will be added to the prototype.
